Portfolio Manager - Facet

Established in 1979, FACET Investment Management Limited is a provider of investment management services to both individuals and corporate clients. Our multi-asset class portfolios give exposure to a wide variety of opportunities and help to manage risk within portfolios. Historically Facet's model portfolios have consistently outperformed numerous established benchmarks and comparable indices.

Key Investment Managers

Chris Fernyhough - Chris has over 15 years' experience managing multi-asset portfolios. Prior to becoming Managing Director of FACET, Chris worked at WH Ireland establishing their Bristol office. He also worked at Newland in the wealth management division. He holds a distinction in the PCIAM exam and is a Chartered Wealth Manager as well as holding Chartered FCSI status with the CISI

John Richard Mitchell - John has a career spanning over 40 years in both equities and bonds. He managed risk at Credit Suisse before moving to Royal London where he implemented risk for their first geared fund. John was also involved in the founding of Newland Financial where he was the compliance director.

Risk Report

Lower risk Higher risk

The indicator is based on historical data and may not be a reliable indication of the future risk profile. The lowest category does not mean 'risk free'

Portfolio Manager's Comments

The US stock market continued its surge to new all-time highs, up 4.25% for the month of March. It has been a remarkable recovery from the lows just over a year ago. With the exception of a couple of setbacks during the second pandemic wave last summer, and speculation ahead of the US Presidential elections in November, the market has exhibited an almost unbroken rise. The successful rollout of Covid-19 vaccinations has given investors renewed confidence that global growth is set to return, led in most part by the recovery of the US economy. UK stocks outpaced their European peers, and banking stocks in particular benefited from the rise in bond yields. The BoE's decision to keep rates on hold rather than cut last December appears now to be vindicated. The UK is currently looking forward to the reopening of its economy. Despite the variance in the pace of the vaccination programs between the UK and the rest of Europe, both markets followed the US higher as investors looked more to the longer-term prospects for their economies. The main trigger for the new surge in stocks was the passing of the full \$1.9 trillion stimulus package proposed by President Biden's administration. It is estimated that this could add up to 6% to the US 1st quarter GDP if the effect is similar to the impact of the \$3 trillion unleashed directly to US consumers last year. Indeed, prospects for the summer economy could be even more dramatic because the US economy was locked down last year. The US savings rate rose by 33% last year to a staggering \$6 trillion. Concern that such a large amount of money could spark an inflationary boom was already evident in February when the US 10-year yield rose to 1.45%. However, it rose further to 1.74%, a far bigger rise than its UK counterpart, the 10-year Gilt yield, which rose just 0.2% to 0.85%. Due to the implied rise in future US interest rates, the US dollar strengthened against the index of major world currencies. In general, March was dominated by moves in the US markets and the combination of rising stock markets, rising interest rates and a rising dollar gave comparisons with periods of "US exceptionalism" whereby US assets appear more attractive to international investors than elsewhere. For now, the moves reflect a firmly optimistic outlook for a return to more normal times for companies and consumers alike. However, as we move into the second quarter, investors globally will be watching for any signs that the economy may be running too hot. More importantly, The US Federal Reserve will also be watching if inflation creeps higher than their 2% target rate.
