Portfolio Manager's Comments

It was another good month for global stock markets, particularly for the USA where the benchmark index rose 6.9% to a new all-time high. European stocks were not far behind, rising 4.1% but the UK returned just 1.8% due to a number of factors weighing on the minds of investors. Not least of these was the announcement by Andrew Bailey, Governor of the Bank of England, who gave that starkest warning yet that interest rates would have to rise much sooner than previously expected in order to combat rising inflation. This came as a surprise, and in total contrast to the view expressed by the US Federal Reserve, who told a gathering of central bankers that, in their opinion, inflationary pressures are temporary in nature. Furthermore, the Bank of England's announcement added to a sense of confusion because the conventional wisdom was always that the bank would wind down stimulus, or quantitative easing, before raising interest rates. The prospect of a rate rise, possibly as soon as 4th November, was an unpalatable one for the bond market, coming as it did so soon after the announcement of tax rises next year. Meanwhile, the European Central Bank, who share the Federal Reserve's more sanguine view of inflation, oversaw the payments of the Covid-19 recovery funds to Italy and Spain which helped to underpin European stocks. In Germany, Angela Merkel ended her 16-year reign as Chancellor as the election handed power to a coalition of centre-ground parties. This was an important election for the both the German and EU economies but will take some time to resolve. As a result, all eyes turned on the USA and the all-important third-quarter earnings season. A very strong bounce back in economic activity had been well-flagged by the data throughout the summer, but company revenues and profits were well ahead of even the most bullish of expectations. Average sales across the biggest US companies were up 15% compared to the average in any normal year of 3%. On the back of that, earnings rose nearly 65%. At the sector level there were winners and losers due to the uneven recovery and bottlenecks in the real economy and this showed up in employment data. While employment did fall to 4.5%, wages continued to rise at an annualised rate of 5.5% amid reports that companies in the leisure sector continue to be constrained by staff shortages. These constraints may mean that GDP growth will moderate from the 5.5% growth seen over the summer. As October drew a close, an increasing number of market strategists were drawing attention to the underperformance of the UK stock market citing low valuations compared to its international peers. The likelihood of the gap closing does exist but may well be dependent on the resolution of a number of political issues ranging from the budget to the Northern Ireland trade agreement.

No amendments were made to the portfolios. However, Baillie Gifford American, BlackRock Emerging Markets and Comgest Growth Japan remain on our Watchlist. The UK Buffettology fund is being closely monitored due to the recent poor performance over the last two months.

IMPORTANT INFORMATION This document has been produced by FACET Investment Management Limited for information only and represents the views of the investment manager at the time of writing. It should not be construed as Investment Advice. No investment decisions should be made without first seeking advice. The Model Portfolio Risk Level 8 is managed by Facet Investment Management Limited, which is authorised and regulated by the Financial Conduct Authority. Before making an investment, you should ensure that you have read and understood the relevant Key Investor Information documents, for all the underlying funds within the portfolio

Slight deviations in the underlying assets for this portfolio may be required subject to availability of investments on the investment platform you are with. Not all platforms have our preferred investment choices available. In this instance, appropriate substitutions will be made.

WARNINGS The Model Portfolio Risk Level 8 is subject to normal stock market fluctuations and other risks inherent in such investments. The value of your investment and the income derived from it can go down as well as up, and you may not get back all the money that you invested. Investments in overseas equities may be affected by changes in exchange rates, which could cause the value of your client's investment to increase or diminish. You should regard their investment as medium to long term. Past performance is not a guide to future performance. Every effort is taken to ensure the accuracy of this data, but no warranties are given. Some of the funds within the portfolio could in exceptional circumstances be subject to a temporary suspension.

All performance figures are cumulative and do not include external or FACET charges

The models are available on a range of platforms and as such holdings, charges and performance may vary

The ongoing charges figure (OCF) shown is correct as at the date of this factsheet but will vary in future depending on the holdings within the Model Portfolio Expense - The portfolio expense is calculated using the weighted value of the Ongoing Costs Ex Ante of the portfolio constituents. Where the Ongoing Costs Ex Ante is not available the OCF is used, and where this is not available the TER is used
