**Using Facet Aviva Risk 3 performance pre-1st March 2020, and Facet Model Portfolio Risk 7 post 1st March. This is due to Facet only running risk models 1-4 as opposed to the new 1-10 risk models available now.

IMPORTANT INFORMATION This document has been produced by FACET Investment Management Limited for information only and represents the views of the investment manager at the time of writing. It should not be construed as Investment Advice. No investment decisions should be made without first seeking advice. The Model Portfolio Risk Level 7 is managed by Facet Investment Management Limited, which is authorised and regulated by the Financial Conduct Authority. Before making an investment, you should ensure that you have read and understood the relevant Key Investor Information documents, for all the underlining funds within the portfolio

Slight deviations in the underlying assets for this portfolio may be required subject to availability of investments on the investment platform you are with. Not all platforms have our preferred investment choices available. In this instance, appropriate substitutions will be made.

WARNINGS The Model Portfolio Risk Level 7 is subject to normal stock market fluctuations and other risks inherent in such investments. The value of your investment and the income derived from it can go down as well as up, and you may not get back all the money that you invested. Investments in overseas equities may be affected by changes in exchange rates, which could cause the value of your client's investment to increase or diminish. You should regard their investment as medium to long term. Past performance is not a guide to future performance. Every effort is taken to ensure the accuracy of this data, but no warranties are given. Some of the funds within the portfolio could in exceptional circumstances be subject to a temporary suspension.

All performance figures are cumulative and do not include external or FACET charges

The models are available on a range of platforms and as such holdings, charges and performance may vary

The ongoing charges figure (OCF) shown is correct as at the date of this factsheet but will vary in future depending on the holdings within the Model. Portfolio Expense - The portfolio expense is calculated using the weighted value of the Ongoing Costs Ex Ante of the portfolio constituents. Where the Ongoing Costs Ex Ante is not available the OCF is used, and where this is not available the TER is used

Portfolio Manager's Comments

It was another difficult month for global stock and bond markets as the persistent rise in inflation threatened to derail global economies by throwing them into recession. Central banks, led by the US Federal Reserve, voiced a strong determination to combat inflation with interest rate hikes but were notably reluctant to back up the rhetoric with action. The Fed hiked rates by 0.75% to 1.75%; a bigger rise than the market was expecting. In contrast, the Bank of England followed suit with just a 0.25% rise which attracted criticism for being well behind the hawkish language used by the Bank since last November. The European Central Bank and Bank of Japan both chose to keep interest rates unchanged. The resulting US dollar strength against all major currencies fuelled higher inflationary expectations for the UK and eurozone. Sterling was a notable loser against the US dollar, falling 7.5% to \$1.21 in just a month. However, as has become a familiar pattern this year, Sterling weakness, which is notionally good for UK exporters, gave some relative support to the main UK stock index heavy with energy, mining and global banking. UK stocks still fell 5.7% in June but compared favourably with the US stock market which fell 8.4%. Growth stocks led the falls, losing on average 20%, versus value stocks which lost half that. Overall, the fall took US stocks back to where they were in February last year. It also took valuations back down to historical averages and some bargain hunting was evident towards month end which stabilised markets a little. The inexorable rise in the price of Brent crude oil peaked at \$124 per barrel in early June as economists dialled down their GDP forecasts. It ended the month at \$116. Other economic indicators, such as consumer confidence, inevitably deteriorated in the face of the rising cost of living across the developed world. However, market attention is not currently drawn by headline economic statistics which, on the whole, are broadly stable – particularly employment and wages. As we enter the second half of the year, investors focus will be on the run up to the third quarter earnings season starting in early October. As a barometer of economic health of the US economy over the summer months, it is by far the most important earnings season in any year, but especially this year. Over the past 25 years, the US economy has repeatedly proved to be incredibly robust in its ability to weather turmoil and in its ability to recover. Investors will be conscious that companies have, for some time, been very cautious in their profit forecasts. Few are ready to call the bottom of the current downturn but there is a palpable sense that the bigger risk is to be out of markets altogether.

No amendments were made to this portfolio this month as it is believed that we are in a strong position to take advantage of any recovery in the market. However, we do still monitor the funds that make up this portfolio for any weakness.

Disappointingly the markets continue to be incredibly Bearish, which has led to further drops in performance. We still maintain that over a medium to long term, our investment theory and asset allocation strategy will prevail and produce good returns, however we appreciate that in the current climate this is causing short term poor performance. We believe that these are short term issues and will be resolved soon, however we are keeping a very close eye on global developments and are ready to alter our strategy should events force us to.
