Portfolio Manager - Facet

Established in 1979, FACET Investment Management Limited is a provider of investment management services to both individuals and corporate clients. Our multi-asset class portfolios give exposure to a wide variety of opportunities and help to manage risk within portfolios. Historically Facet's model portfolios have consistently outperformed numerous established benchmarks and comparable indices.

Key Investment Managers

Chris Fernyhough - Chris has over 15 years' experience managing multi-asset portfolios. Prior to becoming Managing Director of FACET, Chris worked at WH Ireland establishing their Bristol office. He also worked at Newland in the wealth management division. He holds a distinction in the PCIAM exam and is a Chartered Wealth Manager as well as holding Chartered FCSI status with the CISI

John Richard Mitchell - John has a career spanning over 40 years in both equities and bonds. He managed risk at Credit Suisse before moving to Royal London where he implemented risk for their first geared fund. John was also involved in the founding of Newland Financial where he was the compliance director.

Alex Young - Alex has been in Financial Services with FACET for 20 years. He is a qualified IFA as well as holding IMC, a certificate in Discretionary Investment Management, a certificate in Securities Advice and Dealing and a diploma in Technical Analysis.

Risk Report

The indicator is based on historical data and may not be a reliable indication of the future risk profile. The lowest category does not mean 'risk free'

Portfolio Manager's Comments

The stock market rally, which began its recovery in mid-October, continued through November with US stocks up 5.6%. An easing of future inflation expectations was also good for US government bonds which rose 2.7%. Stocks and bonds in the UK and Europe followed suit; UK stocks rose 7.1%. The strong rebound in UK stocks was particularly surprising given the strength of Sterling which rose 5.4% against the US dollar. As we have seen throughout the year, a weaker Sterling has tended to support UK stocks relative to their US peers. However, the move was actually reflective of the fact that the US dollar weakened 5% against the basket of major currencies. The turn in the inexorable rise of the US dollar was a welcome relief for Asian stocks, and emerging market stocks in particular, which gained 15%. As we have seen almost every month this year, the strength of the US dollar has been attributable to the hawkish determination of the Federal Reserve to raise interest rates aggressively from 0.25% throughout the year. Trying to stem inflation, they raised rates another 0.75% in early November, taking the base rate up to 4%. However, the minutes of the meeting, released later in the month, contained what appeared to be an easing of the hawkish stance. It appeared that "a substantial majority" of the Federal Reserve's committee agreed that it would "likely soon be appropriate" to slow the pace of interest rate rises. This set up the prospect of a hike of only 0.5% at the December meeting. The softening in language was immediately supportive of the November rally in both stocks and bonds. The Bank of England may have felt compelled to match the November hike with their own 0.75% raise the day after the Federal Reserve, it is also likely to ease that pace in December. However, UK households are clearly more vulnerable to the rising cost of food, energy and mortgage costs than in the USA. The UK's Office for Budget Responsibility expects real household incomes to fall 7% over the next 30 months to April 2024. On this forecast, it seems likely the UK will fall back into a technical recession in 2023. However, UK retail sales recovered a little in October, rising 0.6% compared to the 1.5% monthly fall. Consumer confidence also appeared to stabilise, albeit weaker than a year ago. Nevertheless, given the softer stance that the main central banks now appear to be taking, stock and bond markets are prepared to look through the backward facing economic data, and sentiment improved markedly in November.

No changes have been made to this portfolio in November, our increased holding in Index Linked Gilts have continued to give us an improved rate of growth compared if we had allocated the 5% property allocation to a property fund. We have continued to avoid property funds due to concerns of the liquidity in the property sector. There performance over one month still has not kept pace with the Sector Average, this is due to the higher Alpha allocation of this portfolio. Any position changes made in the portfolios should not be taken as a buy or sell signal of any assets.

Throughout November, markets have shown a continued recovery and our portfolio has reflected this. However, this is no guarantee of a full recovery in the market. The investment committee continue to monitor the portfolio, looking for possible improvements we can make to our respective portfolios.

IMPORTANT INFORMATION This document has been produced by FACET Investment Management Limited for information only and represents the views of the investment manager at the time of writing. It should not be construed as Investment Advice. No investment decisions should be made without first seeking advice. The Model Portfolio Risk Level 2 is managed by Facet Investment Management Limited, which is authorised and regulated by the Financial Conduct Authority. Before making an investment, you should ensure that you have read and understood the relevant Key Investor Information documents, for all the underlining funds within the portfolio

Slight deviations in the underlying assets for this portfolio may be required subject to availability of investments on the investment platform you are with. Not all platforms have our preferred investment choices available. In this instance, appropriate substitutions will be made.

WARNINGS The Model Portfolio Risk Level 2 is subject to normal stock market fluctuations and other risks inherent in such investments. The value of your investment and the income derived from it can go down as well as up, and you may not get back all the money that you invested. Investments in overseas equities may be affected by changes in exchange rates, which could cause the value of your client's investment to increase or diminish. You should regard their investment as medium to long term. Past performance is not a guide to future performance. Every effort is taken to ensure the accuracy of this data, but no warranties are given. Some of the funds within the portfolio could in exceptional circumstances be subject to a temporary suspension.

All performance figures are cumulative and do not include external or FACET charges

The models are available on a range of platforms and as such holdings, charges and performance may vary

The ongoing charges figure (OCF) show is correct as at the date of this factsheet but will vary in future depending on the holdings within the Model. Portfolio Expense - The portfolio expense is calculated using the weighted value of the Ongoing Costs Ex Ante of the portfolio constituents. Where the Ongoing Costs Ex Ante is not available the OCF is used, and where this is not available the TER is used
