Portfolio Manager's Comments

Silicon Valley Bank (SVB) was not a household name, but its collapse in early March was the second largest in US history. Swift action by Federal Deposit Insurance Company, having received exceptional authority from US Treasury, ensured that \$172 billion of deposits were fully protected. Widely reported as a bailout, the rescue did not call upon taxpayers' money. Nevertheless, the reason for the collapse, unrealised losses on the bank's bond portfolio due to rising interest rates, had ramifications for other regional banks and shares in the sector dropped 35%; a position from which they did not recover by month end. Less than a week later, a day after shares in Credit Suisse dropped 25%, the European Central Bank (ECB) forged ahead with their stated intention to raise their interest rate by 0.5% to 3.5%. A few days later, over a frantic weekend, it was announced that Credit Suisse's main rival, UBS, would be buying out the troubled bank for \$3.25 billion in an all-shares deal – a fraction of its market value only weeks before. Despite the obvious parallels with the early days of the Great Financial Crisis of 2008, and notwithstanding falls in bank shares, stock and bond markets remained remarkably calm. A consensus view emerged that the fall of SVB was a result of its unique exposure to tech companies and start ups and that Credit Suisse was an accident that could've been avoided. Whatever the US Federal Reserve's take on it all, didn't stop it from raising interest rates a quarter-point to 5% in late March. The Bank of England followed suit with a similar hike to 4.25% which appeared justified following a surprise jump up in UK inflation to 10.4% in February. Expectations had been for a drop from 10.1% to 9.9% but the rise in the cost of food was a big factor. The bond markets took the view that the Federal Reserve has reached peak rates while the ECB and Bank of England have not. The resulting weakness in the US dollar saw Sterling strengthen 3 cents to \$1.23. Against the basket of major currencies, the dollar dropped 2%. In spite of the unexpected shocks in the banking sector, March delivered much better economic news for the US, UK and Europe than expected. The US stock market finished the month up 3.5% although UK stocks were held back by the heavy weighting in banks and financials. The 13.6% drop in that sector dragged the UK index to 3.1% fall by month end.

March showed improved growth compared to February. The investment committee continue to monitor the portfolio, looking for possible improvements we can make to our respective portfolios. We believe the allocation for this portfolio is given the appropriate rate of risk/reward given the current global financial system.

No portfolio changes have been made to this portfolio.

We continue to avoid property funds due to concerns of the liquidity in the property sector.

Any position changes made in the portfolios should not be taken as a buy or sell signal of any assets.

IMPORTANT INFORMATION This document has been produced by FACET Investment Management Limited for information only and represents the views of the investment manager at the time of writing. It should not be construed as Investment Advice. No investment decisions should be made without first seeking advice. The Model Portfolio Risk Level 5 is managed by Facet Investment Management Limited, which is authorised and regulated by the Financial Conduct Authority. Before making an investment, you should ensure that you have read and understood the relevant Key Investor Information documents, for all the underlining funds within the portfolio

Slight deviations in the underlying assets for this portfolio may be required subject to availability of investments on the investment platform you are with. Not all platforms have our preferred investment choices available. In this instance, appropriate substitutions will be made.

WARNINGS The Model Portfolio Risk Level 5 is subject to normal stock market fluctuations and other risks inherent in such investments. The value of your investment and the income derived from it can go down as well as up, and you may not get back all the money that you invested. Investments in overseas equities may be affected by changes in exchange rates, which could cause the value of your client's investment to increase or diminish. You should regard their investment as medium to long term. Past performance is not a guide to future performance. Every effort is taken to ensure the accuracy of this data, but no warranties are given. Some of the funds within the portfolio could in exceptional circumstances be subject to a temporary suspension.

All performance figures are cumulative and do not include external or FACET charges

The models are available on a range of platforms and as such holdings, charges and performance may vary

The ongoing charges figure (OCF) show is correct as at the date of this factsheet but will vary in future depending on the holdings within the Model Portfolio Expense - The portfolio expense is calculated using the weighted value of the Ongoing Costs Ex Ante of the portfolio constituents. Where the Ongoing Costs Ex Ante is not available the OCF is used, and where this is not available the TER is used
