Portfolio Manager's Comments

The almost uninterrupted rally in the US stock market, which began in March, came to an abrupt halt as investors took profits during the quietest of the summer months in August. Headlines tried to pin the reason for the sell-off on the continuing deterioration in the Chinese economy; in particular the real estate market. However, such concerns are nothing new and markets ultimately took their lead from a raft of positive US economic data showing a healthy jobs market, falling unemployment, a pick-up in consumer confidence and retail activity. Even a downgrade of US government debt by the ratings agency, Fitch, failed to dent a rally into the last day of August. Indeed, US 10-year bond yields, which under normal circumstances rise in reaction to such a downgrade, fell to end the month at 4.09%. The central bankers' summit at Jackson Hole in the US was reassuringly bland with Federal Reserve Chairman Jerome Powell indicating that the fall in inflation justified no further hikes in base rates for now. The slight pick up in annualised US inflation, from 3.0% in June to 3.2% in July was dismissed as a base effect from the previous year.

The UK and Europe still have much to do in their battles against persistently high inflation. The Bank of England raised interest rates again at their MPC meeting in early August – a rise of 0.25% to 5.25%. UK inflation fell in July to 6.8%, in line with market expectations but still more than double that of the USA, leaving the Bank of England little option but to signal to markets that further interest rate hikes are likely.

Despite the yawning gap in the inflation figures either side of the Atlantic, the US dollar continued its strong rally from the lows in July – gaining 1.7% against the basket of international currencies. This may have been a contributing factor to the larger fall in UK stocks versus their US peers, falling 3.37% in August – financial and mining stocks led the fall. However, the stronger US dollar had much more of an impact on emerging markets stocks where the benchmark index fell over 6% for the month. With the all-important US corporate earnings season around the corner, markets have come through the summer in optimistic mood, based mostly on the view that the USA will lead the developed world into economic recovery, following the inflation and interest rate shock of the last 18 months. Households and consumers have undeniably been put under considerable pressure through the rise in the cost of living. We will find out in October just how much corporations have managed to mitigate in their efforts to preserve their profits for shareholders.

In August the portfolio, again, produced an improved performance against the Sector Average, after taking steps to improve the range of funds, replacing underperforming funds with better performing alternatives whilst retaining the previous asset allocations in the portfolios. The committee believe we are in a better position to take advantage of any upward move as well as defensive against any falls in the market.

We continue to avoid property funds due to concerns of the liquidity in the property sector.

Any position changes made in the portfolios should not be taken as a buy or sell signal of any assets..

IMPORTANT INFORMATION This document has been produced by FACET Investment Management Limited for information only and represents the views of the investment manager at the time of writing. It should not be construed as Investment Advice. No investment decisions should be made without first seeking advice. The Model Portfolio Risk Level 4 is managed by Facet Investment Management Limited, which is authorised and regulated by the Financial Conduct Authority. Before making an investment, you should ensure that you have read and understood the relevant Key Investor Information documents, for all the underlining funds within the portfolio

Slight deviations in the underlying assets for this portfolio may be required subject to availability of investments on the investment platform you are with. Not all platforms have our preferred investment choices available. In this instance, appropriate substitutions will be made.

WARNINGS The Model Portfolio Risk Level 4 is subject to normal stock market fluctuations and other risks inherent in such investments. The value of your investment and the income derived from it can go down as well as up, and you may not get back all the money that you invested. Investments in overseas equities may be affected by changes in exchange rates, which could cause the value of your client's investment to increase or diminish. You should regard their investment as medium to long term. Past performance is not a guide to future performance. Every effort is taken to ensure the accuracy of this data, but no warranties are given. Some of the funds within the portfolio could in exceptional circumstances be subject to a temporary suspension.

All performance figures are cumulative and do not include external or FACET charges

The models are available on a range of platforms and as such holdings, charges and performance may vary

The ongoing charges figure (OCF) show is correct as at the date of this factsheet but will vary in future depending on the holdings within the Model. Portfolio Expense - The portfolio expense is calculated using the weighted value of the Ongoing Costs Ex Ante of the portfolio constituents. Where the Ongoing Costs Ex Ante is not available the OCF is used, and where this is not available the TER is used
